Project Description

DESCRIPTION

Project was completed for the Ministry of the Environment (2 contracts)
Project involved excavation and removal of lead contaminated soil from the yards of various homes on Eastern Avenue in Toronto, Ontario. After soil was removed, new, clean soil was brought in and the yards were restored. Due to the contamination of the soil employees were required to follow strict work procedures which included training for working with contaminated soils, continual clean-up procedures, medical testing and required Personal Protective Equipment
